

SIP Forum UA Config WG

Notes of UA config conference call 2009-09-10,

Participants: Scott Lawrence, Marc Robins, Michael Procter

Apologies: John Elwell, Sumanth Channabasappa

Agenda:

- Sumanth to continue dialog with DNS contact (Peter Koch)

Ongoing.

- Michael to propose text on self-signed certs for UA.

Ongoing.

- Sumanth to propose text on PKI-based certs for UA.

Ongoing.

- Scott to prepare some initial slides for SIPIT and send them to the list for review.

The slides have been reviewed and are ready for presentation next week at SIPit 25.
CLOSED.

3. Review of current draft

Scott will start threads on remaining issues and will wait for more issues to be closed before producing v13.

Would all please review the current v12, and in particular address the 8 open issues that Scott highlights in that document.

Scott and Michael to write an I-D to register the new tag in the IANA registry. This should be relatively straightforward, and will reference the SIP Forum document to define the usage details.

Scott raised a niggle with the way a URI will be obtained via NAPTR.
Michael will supply references to the DDDS RFCs to resolve the ambiguity.

4. AOB

Marc offered operational support for the ongoing work.

5. Next call

Regular Monday meetings will resume on 2009-09-21, at the usual time (16:00 BST)

Michael
