

Thursday, November 12, 2009 3:11 PM
Minutes of meeting - Nov 12 2009

Participants:

Rich Shockey – SIP Forum
Marc Robins – SIP Forum
Joe DiAdamo - Siemens Enterprise
Shidan Gouran - HomeJini
Sanjay Sinha - Cisco
Bill Leslie - Longboard
Arjun Roychowdhury - Hughes Systique

Points of Discussion:

1. Rich introduced the group formally, talked about goals and objectives
2. discussion on current activities:

a.. we are closely tracking/participating in 6lowapp. Focus of this group is not yet concretely defined - but looks like this group will split into several subgroups with different charters.

The charter of the CORE group may be for very restrictive devices (no one there has clearly been able to articulate what these devices are and their expected growth in the market compared to more powerful devices. Also, no one has yet presented a clear modeling on how constrained #s have been arrived at).

b. Our current understanding is that SIP should definitely be positioned at the CoGII (at the least) and smart devices that are more capable than the 12/24k memory devices.

c. Joe sent out the ToC of the SIP whitepaper this group needs to author. We are doing an internal review on layout and will send the ToC out to the group by Friday this week for inputs

d. There was discussion on the various standards/industry orgs. that are defining usecases and protocols for the SG ecosystem. Shidan will send out a consolidated list of the same

3. An initial draft matrix of the applicability of SIP in various 'service areas' of SG has been created - currently under internal review - will be posted to the group soon. This matrix will give a birds eye view of the areas we will be diving into more detail.

regds

Arjun Roychowdhury
